

Comtest Engineering achieves Quality Management System Registration to ISO9001:2008.

*For immediate release:
24-03-2010, Zoeterwoude.*

Following a process lasting almost one year, Comtest Engineering BV has had its work processes accredited to the internationally recognized quality management system standard, ISO 9001: 2008.

Awarded by Quality Masters, a Dutch leader in quality assurance for business, government and society, the designation certifies that Comtest has met the highest standards of good management practices and formalized business processes.

The certification provides an objective benchmark upon which customers can assess Comtest and its products services. Comtest's managing director and founder Hein de Groot has put ISO9001 certification on the agenda to further improve business practices and to ensure quality control externally as well as in-house.

"Being ISO certified means that our company's procedures and operations have been refined to meet top industry standards," Hein de Groot said. "This benefits our customers because they know that they will meet a reliable partner for the quality products which we have always delivered".

Bas de Groot, Quality manager of Comtest, commented: "We are delighted to achieve accreditation, gaining recognition for our commitment to quality and to continuous improvement. We are proud to join over 500,000 organizations across the globe that have established ISO 9001 as the preferred quality assurance standard".

"In working towards this award, we have analyzed and challenged every aspect of Comtest's operations, involving every employee and a number of clients and suppliers. This has resulted in many improvements to both what we do and how we do it".

The ISO certification comes in the same year that Comtest celebrates their 25th anniversary." "This is a big year for Comtest," Hein de Groot said. "After twenty five years in business, we're taking things to the next level. We are proud of what we have accomplished and look forward to further develop our company in the next 25 years!"
